The COVID-19 pandemic helped the edtech sector's exponential growth resulting in massive hiring in the sector but experts believe that with schools opening, this upward trajectory is likely to consolidate.

The pandemic has drastically changed the way teaching and learning is done, and funding for ed-tech remains bullish leading to advanced technology adoption, revenue growth and hiring, CIEL HR Services Director and CEO Aditya Mishra told PTI.

"We estimate there are over 10,000 active vacancies across all levels and permanent roles in the industry. In addition, there are at least 50,000 temporary job vacancies in the edtech sector," he said.

However, the intensity of action in terms of recruitment, investment, and new registrations is expected to drop slightly as the physical model begins to function normally, he said.

"The number of new start-ups in the space will eventually drop. Although the growth rate will decline, the momentum will continue as many schools and students are not yet reached by edtech.
